

Post Processing Guide Paper

This is Guide Paper that introduce how to apply Post Processing in this asset.

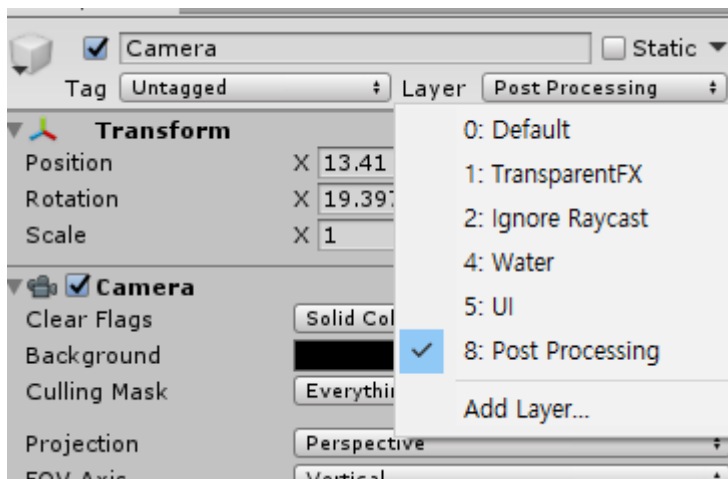

First, you need to download Post Processing Package. Go to Window/Package Manager and search 'Post Processing'.

If package is founded, please download this. Then you can use post processing effect in this asset.

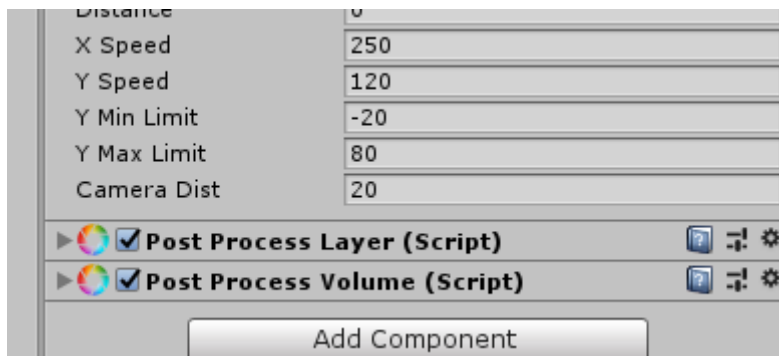

I already apply post processing in main camera but If you want to know how to apply to main camera, follow this.

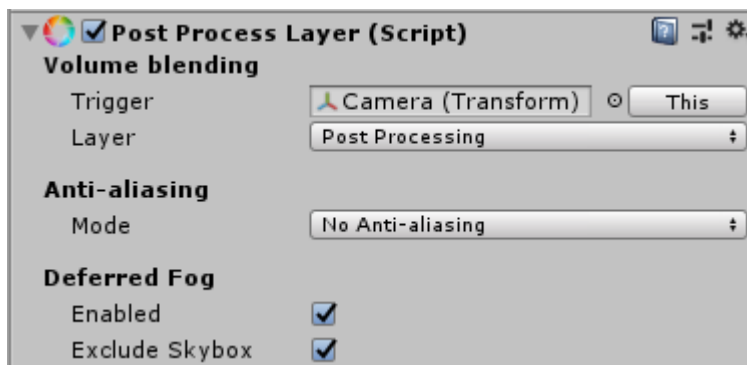

First, you need to set Layer in maincamera. In this example, I set camera's layer to 'Post Processing'

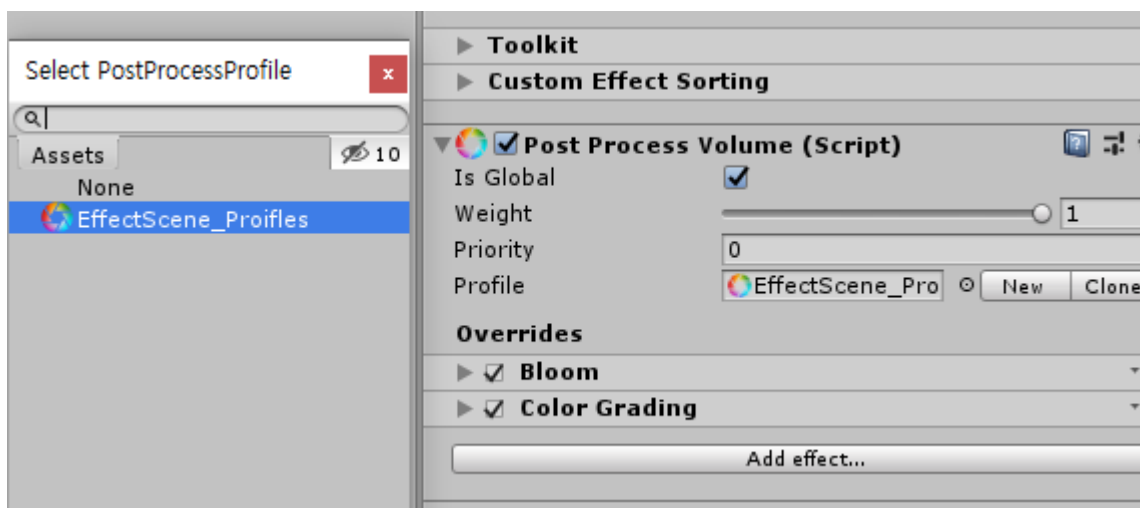

Second, attach 'Post Processing Layer and Volume' in main camera

Click 'This' in Trigger Button and set Layer to 'Post Processing(maybe your one)'

Check 'Is Global' and Set Profile that already made.

This is Result
